

Flexi-Trolley 800 Offroad

800kg

Safe Working Load

The Flexi-Trolley 800 Offroad is designed to carry glass panels and sheet construction materials. Its design means that it can be disassembled quickly and its compact size allows it to be transported in the boot of any estate car.

This glass trolley can be used to transport loads of 2000mm x 3000mm with a thickness of up to 140mm. Its construction is simple, the wheeled side supports are held together with three bars, which can be adjusted to accommodate different load sizes. Optional 6000mm bars are available for longer loads.

As standard, the Flexi-Trolley 800 Offroad comes complete with pneumatic rubber tyres, useful for when using the trolley over rougher terrain. The frames are painted aluminium and other sizes are available to purchase on request.
